Oncogenesis is a complicated process involving signal transduction pathways that mediate many different physiological events. Typically,

Where To Download

Oncogenes cause unregulated cell growth and this phenotype has been attributed to the growth-stimulating activity of oncogenes such as ras and src.

~~Tyrosine kinase receptor activated signal transduction~~

Where To Download

Diabetes seems to promote the activation of the Ras/Raf/MAPK signal transduction pathway mainly by induction of erbB2 and erbB3 receptors, leading to increased cell proliferation, while there was no difference in apoptosis levels
