Abstract. Restricted (confirmatory) and unrestricted (exploratory) factor analyses were used to investigate the factor structure of the Social Problem-Solving Inventory (SPSI; D'Zurilla & Nezu, 1990). The SPSI is based on a theoretical model consisting of two general components (problem orientation and problem-solving skills) which are further divided into seven primary subcomponents (cognitive, emotional, and behavioral aspects of problem orientation and four specific problem-solving skills).

"We put together a book that would offer readers multiple perspectives, insights, and directions in understanding social problem solving as an important theory that has driven wide-ranging scientific research and as an important means of training to empower and elevate the lives of individuals. We believe that social problem solving can help individuals free themselves from the problems they face or the distress that these problems cause. We recognize that some problems may be difficult or impossible to solve, but we believe that considerable value remains in understanding and promoting effective social problem solving to foster the novel insights and methods in which problems that seem insurmountable ultimately may be conquered in incremental steps, across time and across individuals. Moreover, we believe that problems can be solved in different ways. When problematic situations or circumstances are manageable or controllable, a good problem solver tries to find ways to change them for the better. However, when such situations or circumstances are unchangeable or uncontrollable, one can still use problem solving to find ways to accept and tolerate with less distress that which cannot be changed or controlled"--Preface. Social skills are at the core of mental health, so much so that deficits in this area are a criterion of clinical disorders, across both the developmental spectrum and the DSM. The *Practitioner's Guide to Empirically-Based Measures of Social Skills* gives clinicians and researchers an authoritative resource reflecting the ever growing interest in social skills assessment and its clinical applications. This one-of-a-kind reference approaches social skills from a social learning perspective, combining conceptual background with practical considerations, and organized for easy access to material relevant to assessment of children, adolescents, and adults. The contributors' expert guidance covers developmental and diversity issues, and includes suggestions for the full range of assessment methods, so readers can be confident of reliable, valid testing leading to appropriate interventions. Key features of the *Guide*: An official publication of the Association for Behavioral and Cognitive Therapies Describes empirically-based assessment across the lifespan. Provides in-depth reviews of nearly 100 measures, their administration and scoring, psychometric properties, and references. Highlights specific clinical problems, including substance abuse, aggression, schizophrenia, intellectual disabilities, autism spectrum disorders, and social anxiety. Includes at-a-glance summaries of all reviewed measures. Offers full reproduction of more than a dozen measures for children, adolescents, and adults, e.g. the Interpersonal Competence Questionnaire and the Teenage Inventory of Social Skills. As social skills assessment and training becomes more crucial to current practice and research, the *Practitioner's Guide to Empirically-Based Measures of Social Skills* is a steady resource that clinicians, researchers, and graduate students will want close at hand.

The evidence for social problem solving deficits being relevant to the understanding and treatment of offending behaviour has been accumulating since the 1980s. Reasoning and Rehabilitation (R&R), the first structured cognitive-behavioural treatment programme used widely with prisoners, included social problem solving as a key component and is now in use worldwide. More recently, interventions that focus specifically on social problem solving have recently been developed. Arranged in three parts (evidence, evaluation and evolution and exploration), this book draws together aetiological and therapeutic research evidence and practice over the last twenty years in social problem-solving with offenders.
