

Usace Design Guidelines

As recognized, adventure as without difficulty as experience more or less lesson, amusement, as well as accord can be gotten by just checking out a ebook usace design guidelines afterward it is not directly done, you could acknowledge even more going on for this life, a propos the world.

We pay for you this proper as capably as easy exaggeration to get those all. We find the money for usace design guidelines and numerous books collections from fictions to scientific research in any way. in the midst of them is this usace design guidelines that can be your partner.

Seattle District > Missions > Civil Works > Engineering ... The US Army Corps of Engineers (USACE) and the US Department of Health and Human Services (HHS) compiled the following materials to support States and municipalities in creating ACSs to support their medical requirements during the COVID-19 pandemic. Implementation of Alternate Care Sites is a State-led and managed process.

Alternate Care Sites Retrofitting Guidance engineering and design, between CERP projects and the traditional USACE civil works process is that the reconnaissance and Feasibility phases are replaced by the PIR phase under CERP. Otherwise,...

This UFC provides guidance for Department of Defense facilities to achieve high performance and sustainable building requirements in compliance with the Energy Policy Act of 2005, the Energy Independence and Security Act of 2007, EO 13423, EO 13514, and the Guiding Principles for Federal Leadership in High Performance and Sustainable Buildings (Guiding Principles).

The purpose of this manual is to present basic principles used in the design and construction of earth levees. The term levee as used herein is defined as an embankment whose primary purpose is to furnish flood protection from seasonal high water and which is therefore subject to water loading for periods of only a few days or weeks a year. Embankments that are subject to water loading for prolonged periods (longer than normal flood protection requirements) or permanently should be designed in accordance with earth dam criteria rather than the levee criteria given herein. Even though levees are similar to small earth dams they differ from earth dams in the following important respects: (a) a levee embankment may become saturated for only a short period of time beyond the limit of capillary saturation, (b) levee alignment is dictated primarily by flood protection requirements, which often results in construction on poor foundations, and (c) borrow is generally obtained from shallow pits or from channels excavated adjacent to the levee, which produce fill material that is often heterogeneous and far from ideal. Selection of the levee section is often based on the properties of the poorest material that must be used.

EM-385-1-1 manual is vital in getting and maintaining work on government contracts. It includes all safety and health requirements for all Corps of Engineers activities and operations, including Naval Facilities Engineering Command (NAVFAC) construction and Department of Defense projects.

The Unified Facilities Criteria (UFC) system is prescribed by MIL-STD 3007 and provides planning, design, construction, sustainment, restoration, and modernization criteria, and applies to the Military Departments, the Defense Agencies, and the DoD Field Activities in accordance with USD(AT&L) Memorandum dated 29 May 2002. UFC will be used for all DoD projects and work for other customers where appropriate. All construction outside of the United States is also governed by Status of Forces Agreements (SOFA), Host Nation Funded Construction Agreements (HNFA), and in some instances, Bilateral Infrastructure Agreements (BIA). Therefore, the acquisition team must ensure compliance with the more stringent of the UFC, the SOFA, the HNFA, and the BIA, as applicable. UFC are living documents and will be periodically reviewed, updated, and made available to users as part of the Services' responsibility for providing technical criteria for military construction. Headquarters, U.S. Army Corps of Engineers (HQUSACE), Naval Facilities Engineering Command (NAVFAC), and Air Force Civil Engineer Support Agency (AFCESA) are responsible for administration of the UFC system. Defense agencies should contact the preparing service for document interpretation and improvements. Technical content of UFC is the responsibility of the cognizant DoD working group. Recommended changes with supporting rationale should be sent to the respective service proponent office by the following electronic form: Criteria Change Request (CCR).
